Since more than half a century ANL Plastics develops and produces plastic containers that meet the increasing expectations and demands of both consumers and producers. Our customized solutions enable you to deliver your final product in perfect condition to your end customer or consumer in a package that meets the highest standards in terms of product protection, design, quality and durability.

# More than 55 years of know-how and experience

## ANL Plastics develops plastic packaging for

### Confectionery

Within the field of packaging for food ANL Plastics has developed a particular expertise in developing packaging trays for chocolates, chocolate and biscuits. Design and finish, entirely according to your wishes, play a decisive role here.

### Food

In our standard range you will find a very wide range of packaging for meat and fish, vegetables and fruits, ready-to-eat meals, dairy products, pastries and salads. Do you have specific needs or challenges? Then we will gladly develop a customized packaging, together with you and exclusively for you.

### Non-food

Each sector has specific packaging requirements, be it in terms of product protection during shipping or for branding and sales support purposes. ANL Plastics possesses the know-how and experience to develop the most appropriate solution together with you.

## Co-creation from concept to finished product

Your packaging challenge is also ours. Your product, your production environment and your branding are our guideline. All process steps in the development of your package will be done in-house, at ANL Plastics. From the initial design sketch through to the development and production of the mould and as well as of course thermoforming of your customized packaging. It all takes place in our own establishments in Belgium, France and Poland and is done by our own employees.

## SERVICE

### Our service does not stop with the production of your packaging

- At ANL Plastics a dedicated team is at your disposal. They not only help you to design your customized packaging but also with the industrial use of your packaging in your production or logistic process.
- You have direct access to your own order portfolio through an on-line platform.
- You choose your method of over-packing.

## Driven by innovation and new trends

The starting point for the development of new packaging is primarily the specific need of our customers. Additionally, we also pro-actively look for new, innovative solutions. We keep, as it were, our sights continuously focused on the European market and are guided by:

- The altered needs and expectations of consumers
- Feedback from our customers
- New technological developments in the world of plastics
- General trends in the packaging world
- Specific trends in packaging for each target group or sector

The result of our pro-active approach is reflected in a wide range of standard packaging products, which are primarily characterized by an excellent value for money..

Moreover, with four state-of-the-art proprietary product lines we can provide you with the cream of the crop in terms of innovation.

### 4 state-of-the-art proprietary product lines

**Visiopac®**  
Innovative MAP packaging, which has two made-to-measure parts that are connected by means of a printable sealing ring

**Piramyd®**  
Luxury retail packaging designed to provide optimum product facing

**Cubb-x®**  
The innovative blister packaging

**Peelpaq®**  
Sealing tray with easy opening and reclosing

**YOUR quality OUR focus**

Each step in the development and production is done internally at ANL Plastics:

- Conceptional phase**  
Based on your briefing the first 2D or 3D drawings are made. You immediately get a realistic representation of your packaging as it will eventually present itself.
- Tooling**  
An approved concept drawing is the basis for the design of the plastic mould. Both the prototype and the finished tools are manufactured internally at ANL Plastics. We therefore have the development process fully under control and we can make adjustments where necessary.
- Extrusion**  
ANL Plastics has its own extrusion department for the production of plastic foil from which your package will subsequently be formed. Here, among other things, the colour, transparency, finish and other physical properties of your product are determined.
- Thermoforming**  
During the actual production process, the plastic is heated and through use of the mould transformed into your custom packaging.
- Recycling**  
Production waste from the forming process is internally recycled and reused to the maximum extent.

ANL plastics continually invests in new, innovative concepts and in state-of-the-art technology.

ANL plastics has 3 production sites in Europe: Wellen (HQ, Belgium), Cahors (France) and Dąbrowa Górnicza (Poland). This allows us not only to supply all over Europe in a fast and logistically efficient manner, we can also offer our customers a guaranteed production capacity. Each production mould, after all, can be used in each of the 3 locations.

- ANL Plastics annually produces:
- 400 concept drawings for new packaging
  - 360 prototype moulds
  - 260 production moulds
  - 1.5 billion packaging items

Our ongoing efforts for process improvements and for the further development of our products translate into an ISO 9001 and ISO14001 and BRC/IoP certification.
